# ExpandIT MailIT

- for NAV/Navision

ExpandIT MailIT allows you to send emails/fax from NAV/Navision that looks the way you want them to look. You can use ExpandIT MailIT for specific, individual emails/fax, such as sending a signed worksheet or an invoice to a customer; for mass emailings; or you can use ExpandIT Launch Utility to automate recurring emails.

ExpandIT MailIT is a COM object and it can send emails through an SMTP mail server or a desktop email client such as Microsoft Outlook. SMTP-emails are normally independent of the specific email client installed on the machine where the component is used. The component will contact the mail server directly and deliver the mails you create or it will interact with your existing email client.

Below you can see one of the Navision-code examples that comes with the product and which sends an invoice with 'From', 'To' and 'Bcc' specified by Navision and with a PDF-version of the invoice attached. The PDF-driver is available as part of the product.

Product functionality and advantages in brief:

- HTML-emails (logos and pictures).
- Fax.
- PDF-driver included.
- Outlook for individual emails.
- SMTP for mass mailings.
- COM-object used by Navision code.
- Currently 74 documented methods.
- No NAV/Navision prerequisites.
- The customer license must have free NAV/Navision objects in order to use the code examples.
- Any HTML-editor can be used.
- Can be used in other ERP-systems also.

Use case scenarios:

Order Confirmation
An email order confirmation is prompted by a sales order and mailed to your customer. Shipment information and payment terms from the administrative system are included in the mail.

Work sheets
Signed work sheets are sent directly to your customer with a PDF-copy attached.

Invoices
Invoices are sent directly to your customer with a PDF-copy attached.
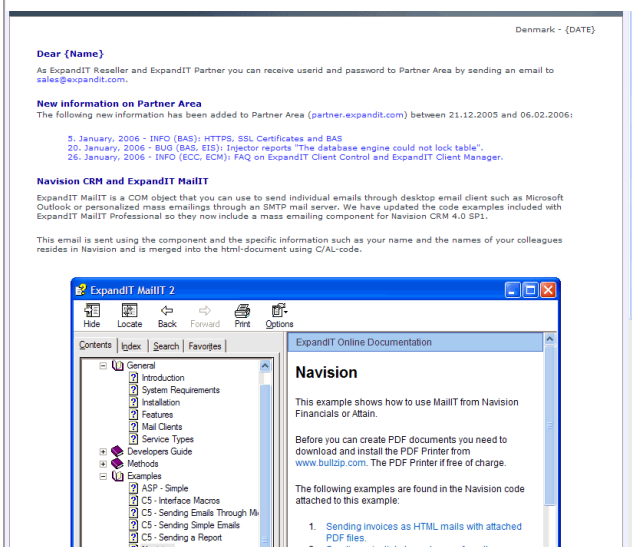

Purchase orders
Purchase order information is sent directly to your vendor's sales department with a PDF-copy of the order attached.

Sales statistics
Each salesperson receives sales statistics on a daily basis or on request. Used in combination with ExpandIT Launch Utility these recurring mails can be automated and scheduled using Windows Scheduled Tasks.

Newsletters
1000 personalized emails with Navision information, pictures and hyperlinks are sent by the SMTP server from Navision to contacts managed by Navision. The

email is designed in the marketing assistant's favourite HTML-editor and sending the emails takes less than 3 minutes.

ExpandIT MailIT can be downloaded from www.expandit.com and it comes with code examples for a number of ERP systems including Navision.
