Simple Notification

This tool sends an email when a situation occurred.

The situation is composed by calculating an operation from a field of a table. The calculation can be a SUM, COUNT, AVERAGE, MIN or MAX, and the result is compared with a value. The options of comparison can be =, <>, >, >=, < or <=. The table can be filtered.

The examples included in "Simple Notification Data.txt" file show how send an email when:

1. US customers have reached 300,000eur. of sales.
2. Today have entered more than 10 orders
3. Some customer has more than 10,000eur. credit

If the situation occurred an email will be send, when the condition is no longer fulfilled the situation is restored, and if occurred again, another email will be send.

Run Form 63000 and import example data. Push "Run Notifications" button for evaluate all the situations and send emails, if proceed.

NOTE:
- SMTP mail must be configured.
- Must be executed under English language.
