

- Consistent, accurate shipping
- Reduce dispatch related costs
- Simplify administrative tasks
- Eliminate data entry errors
- Simple and easy integration

The Parcelforce Integration Add-on for Dynamics NAV helps and supports every member of the logistics department. Our solution makes it easy for companies to manage their Parcelforce shipping process with **greater control** and **less effort**, all within one **easy to use**, consolidated software system.

The Add-on **simplifies** time consuming areas of the shipping process, leaving employees to concentrate on **business critical** areas, without wasting time on manual, administrative tasks. The Parcelforce Integration Add-on helps **eliminate errors**, **save time** and **reduce the costs** associated with traditional shipping processes.

The Parcelforce Integration Add-on unifies shipping, dispatch and logistics into one cohesive system, automatically producing the parcel numbers and all of the related labels and documents. This helps eliminate errors caused by retyping address information into multiple software systems.

The system calculates the cost of delivery to charge back to their customer based on the weight of the order. This allows completely accurate shipping costs to be charged at the point an order is completed, saving costs and overheads considerably.

Once the order is ready to be shipped, the dispatch department can access a new interface which allows them to add additional information, such as the number of packages, whether proof of delivery is required and any special delivery instructions. They can create the address labels directly from Dynamics NAV, along with any required international documentation, such as customs declarations.

Feature
Testing of shipping submission details on release of sales order. A list of errors is displayed with administrator comments outlining how to resolve the errors.
Submission of Shipment Request
Submission of Label request and auto print
Submission of Manifest Request
Separate document created from Inventory Pick for the shipping consignment, allowing the addition of more details at a later stage.
The Shipping Consignment allows the sending of non-sales related shipments
