

# Advanced Credit Cards

for Microsoft Dynamics™ AX

Securely Accept  
and Process Credit  
Card Payments

Red Maple's Advanced Credit Cards provides companies using Microsoft Dynamics™ AX the ability to securely accept and process credit card payments. It delivers an end to end credit card solution for sophisticated corporations looking to increase efficiency in the order fulfillment process while offering the best customer service.

As an integrated solution within Microsoft Dynamics™ AX, Advanced Credit Cards allows companies to:

## Business Situation

Companies that process credit card transactions within Microsoft Dynamics™ AX have to use an outside solution to process transactions. Outside solutions require either re-keying the information or using ODBC solutions, making for potentially unreliable data.

## Solution

With Advanced Credit Cards for Microsoft Dynamics™ AX, companies can process transactions through a secure solution such as PayPal's Payflow Pro.

### Secure Payment Transactions

Red Maple's Advanced Credit Cards ensures that credit card data is secure during the storage and transmission of credit card data by including application encryption out of the box. With Red Maple's Advanced Credit Cards, no additional configuration is necessary to:

- Ensure sensitive credit card data is never stored unencrypted
- Restrict all users from seeing sensitive credit card data
- Provide security features required for PCI compliance for applications processing credit cards

### Payment Application Best Practices (PABP) Certification

Red Maple's Advanced Credit Cards includes Payment Application Best Practices (PABP) certification which conforms to Visa's Processor Application Best Practices (PABP). And all application encryption uses the .Net 2.0 encryption framework which means that data is secure without any additional database implementation or setup.

### Additional Country Support

Red Maple's Advanced Credit Card includes additional tools and processors for companies that generate business outside the United States.

### Handle Complex Transactions

Red Maple's Advanced Credit Cards provides companies with enhanced functionality to support numerous business scenarios and handles:

- Multiple Cards and transactions per sales order
- Purchase level 2 and 3 cards Card Verification Data (CVD) for secure processing

- E-commerce, Retail and Direct (MOPO) industries for reduced transaction rates

### **Increase Credit Card Processing Efficiency and Reduce Administration**

Red Maple's Advanced Credit Cards makes fulfillment of orders and payment of invoices efficient through features designed for the enterprise client. Companies can:

- Receive payments via credit cards in customer payment journals
- Capture funds on picking list, packing slip or invoice
- Reduce administration with automatic authorizations that automatically renew when previous authorizations have "expired"
- Assign users to terminals for easy reconciliation of transactions
- Assign different banks to each accepted credit card type for easier reconciliation

### **Credit and Void Functionality**

Red Maple's Advanced Credit Cards includes the functionality from Red Maple's Credit Card Essentials that improves customer service and workforce productivity by adding functionality to allow you to process sales, credits and voids without having to perform custom programming.

- Avoids the need to create duplicate entries to reverse a credit card return by allowing companies to directly credit or void transactions that occur within their business.
- Controls the cash flow and business process by not allowing credits without the appropriate credit note and referencing sales order.

### **Aligns Complex Business Infrastructures**

Red Maple's Advanced Credit Cards gives companies the flexibility to configure credit card settings to fit their business needs while maintaining customer service levels. Features include:

- Simultaneous handling of multiple terminal configurations to allow for different settings per user or group
- Use of PayPal Express as a method of payment while capturing funds at fulfillment.
- Additional processors such as PayPal, Chase Paymentech, FDMS and Global Payments

### **Oracle Customers**

Provides Microsoft Dynamics™ AX Customers using Oracle databases to store credit card information with credit card storage and transmission encryption.
