

NAV TOOLBOX

Object Analyzer

Hotfix Search Tool

Hotfix Search^{Free}

Free cloud-based tool

Tired of wasting time looking for a relevant hotfix? Relax, we have good news for you. We have stored all hotfixes from NAV 5.0 until BC14 for all localizations provided by Microsoft and made it possible for you to search exactly what you are looking for in just seconds.

Smart code compare to see update changes

For all hotfixes from NAV 2015 to BC14, we also provide the option to perform a code compare with the previous version of the same object on the same product version and country version.

A convenient search tool

With the Hotfix Search tool, you can search for all hotfixes from Microsoft by keyword and at the same time narrow down the search by providing the specific NAV/BC version, country localization and CU level. All search results are provided in a smart and advanced overview table, where you can narrow down the search further e.g. by special text, area, object type etc.

**Save time with the
powerful Hotfix Search**

Advantages of Hotfix Search

See how you can search for relevant hotfixes with the powerful Hotfix Search tool, compared to alternative search methods!

Alternative search engines	Object Analyzer
Basic Search Options	Basic Search Options
<div><div>✓</div>Text or knowledge ID</div>	<div><div>✓</div>Text or knowledge ID</div>
<div><div>✗</div>NAV/BC version</div>	<div><div>✓</div>NAV/BC version</div>
<div><div>✗</div>NAV/BC localization</div>	<div><div>✓</div>NAV/BC localization</div>
<div><div>✗</div>CU level</div>	<div><div>✓</div>CU level</div>
Filtering options	Filtering options
<div><div>✗</div>Special text</div>	<div><div>✓</div>Special text</div>
<div><div>✗</div>Function area</div>	<div><div>✓</div>Function area</div>
<div><div>✗</div>Object type</div>	<div><div>✓</div>Object type</div>
<div><div>✗</div>Object number</div>	<div><div>✓</div>Object number</div>
<div><div>✗</div>Release date</div>	<div><div>✓</div>Release date</div>

Bonus feature!

In several cases Microsoft has provided an release note for an update, but the actual CU package does not include the specific change. The Hotfix search tool will for each update check if the specified object has been modified or not. If the object(s) has not been updated, you will be notified.

Undocumented changes

Occasionally Microsoft does not provide any documentation for objects they change as part of a cumulative update. This makes it difficult to identify if a particular issue has been officially addressed or if a custom fix should be developed. Object Analyzer's hotfix search identifies such undocumented changes and perform a code compare to see what Microsoft has updated. This can save you a lot of time trying to identify why a particular function is not working, but Microsoft has fixed it, just not notified about it.

Provided for each Hotfix

- ✓ Number of updated objects in Knowledge ID
- ✓ Ability to compare with previous hotfix
- ✓ URL to Microsofts release notes
- ✓ Cumulative Update number
- ✓ If update is missing in object
- ✓ Description of changes
- ✓ Product version
- ✓ Country version
- ✓ Functional area
- ✓ Knowledge ID
- ✓ Release date
