

Microsoft® Navision Attain®

Microsoft Navision Attain for- Manufacturing

Respond quickly to rapidly changing customer demands.

Key Benefits

- Take advantage of new revenue opportunities
- Provide more responsive customer service
- Improve business performance from shop floor to bottom line

"With the old system it was nearly impossible to keep up with all the changes. But with Navision we are on top of it, with great visibility into all our processes. Since we got Navision we've been able to increase productivity by 15-20% and cut lead times by around 2.5-5%."

**Joachim Baum, IT Manager, Herzog GmbH,
a Just-in-Time German manufacturer of
precision machine parts.**

Microsoft Navision Attain for – Manufacturing

Turn Changing Customer Needs into New Revenue Opportunities

Microsoft Navision Attain for manufacturing gives you the adaptability you need to take advantage of new revenue opportunities.

Provide Better Customer Service

Good service will make customers want to do business with you again and again. When customers know that you can answer any question about an order at any given time, they won't look elsewhere.

Respond Quickly to Customer Changes and Questions

Being able to respond quickly to customer changes and questions gives you a competitive advantage. Order promising gives you the ability to promise your customers a reliable delivery date immediately, on request.

With Microsoft Navision Attain for manufacturing, rush orders can be planned immediately from the sales order. Orders can be modified at any point in the production cycle. Multilevel production orders improve coordination of made-to-order requests, and simplify the implementation of make-or-buy decisions.

Multidimensional tracking allows you to respond instantly to customer inquiries about order status.

NAVISION®
The Way to Grow

Access tracking to the dispatch list allows the shop floor manager to determine which customers would be affected if you moved a job.

Improve Your Business Performance

Microsoft Navision Attain for manufacturing helps you run your business more efficiently, so you improve business performance from the shop floor to the bottom line.

Change Manufacturing Methods and Processes Instantly

Microsoft Navision Attain for manufacturing allows you to instantly change manufacturing methods and processes, helping you to keep up with changing customer needs. You can modify components and operations on the fly, even on released production orders.

When a change occurs, you can update and replan all materials, costs and operations simultaneously, without time-consuming batch jobs.

Multiple planning options, tracking, and action messaging allow you to quickly and easily make exceptions and last-minute changes to give customers what they want, when they want it. You can plan from the sales order, the production order, the purchase requisition, or by traditional MPS/MRP planning methods. Furthermore, purchase planners can easily recognize how to adjust supplier delivery

schedules to take advantage of new revenue opportunities.

Change Business Processes Easily

With Microsoft Navision Attain for manufacturing, you can readily change your business processes to accommodate changing workload and customer requirements. You can implement realistic plans according to your capacity demands, and you can redefine:

- Order modifiers and reorder policies as needed
- Capacity and calendars to optimize shop load
- Manufacturing policy options to adapt quickly to new projects

Implement the Most Efficient Processes Immediately

When a customer's needs change, you can easily incorporate the changes made on the shop floor to optimize the current workload. For example, parallel routing enables you to create critical operational paths for make-to-order and project manufacturing.

Design Efficient Manufacturing Processes

Microsoft Navision Attain for manufacturing provides powerful planning tools that give you the freedom to choose the optimum manufacturing process for ultimate profitability.

For example, when planning production orders, you

Navision became part of Microsoft Business Solutions as of July 11, 2002.

can plan product family orders that share the same routing. This allows you to make more efficient build schedules.

To help you better meet customer demand, Microsoft Navision Attain supports efficient collaboration with long-term partners through the use of blanket orders.

Speed Up Orders

Microsoft Navision Attain for manufacturing speeds up orders by providing visibility into all aspects of your manufacturing processes. You can improve efficiency and reduce lead time by:

- Redefining setup and queue times on the fly
- Redefining capacity on the fly
- Using the send-ahead function to control material flow to the next operation

Gain Greater Visibility of Your Business Processes

Microsoft Navision Attain for manufacturing helps you quickly identify processes that could be changed to operate more efficiently and profitably. For example, shop floor operations are readily visible to management so you can easily design new processes to produce a positive impact on the bottom line. And, you can respond immediately to emergencies because they are easy to spot, track and act upon.

You can also plan from the sales order. This gives you the flexibility to define the product order structure,

making it easier to track the status of multiline and/or multilevel orders.

Inefficiencies are easy to spot because you can monitor shop floor progress job-by-job.

You can also make better pricing decisions because costs, materials, and operations are simultaneously replanned to reflect shop floor changes.

You can switch instantly between manufacturing policies to optimize your business and plan additional critical paths, on the fly, to improve delivery.

Implement without Disruption

You get immediate value from your investment because Microsoft Navision Attain for manufacturing can be implemented with little disruption to your current manufacturing processes.

You can start with a basic implementation and benefit immediately. Then, you can add value with phased software implementation – expanding functionality as your business needs require.

Training time is reduced because you can retrain with phased implementation. Flexible planning options let you manually plan production orders, or plan them from sales orders, while implementing MRP functionality.

Navision became part of Microsoft Business Solutions as of July 11, 2002.

While you implement capacity requirements planning (CRP) and routings, you can calculate and plan production times based on lead times on the item card.

Microsoft Navision Attain for manufacturing is designed for maximum operational and setup flexibility, so that implementation time is reduced to a minimum. You can fine-tune the system while it is working and easily implement changes as your operations demand. Furthermore, you don't need to forecast all manufacturing scenarios during setup – you can respond on the fly.

Effectively Manage your Warehouse and Manufacturing

Another application area of Microsoft Navision Attain is Warehouse Management Systems (WMS), which enables you to increase the efficiency of your warehouse. Navision WMS works hand in hand with your Attain for manufacturing solution. WMS functionality enables you to speed up the order handling process to increase customer service and reduce warehouse costs. It provides accurate and transparent inventory data to allow you to streamline your warehouse operations. Navision WMS also gives you the warehouse management tools to be able to optimize your warehouse layout and space utilization.

Data Sheet – Manufacturing

Key Features	Description
Basic Manufacturing	Production Orders <ul style="list-style-type: none"> • Production orders (including simulated, planned, firm planned, released and finished orders) created and handled • Production orders planned from sales orders as standard, project, or multiline • Reservation system provides for hard and soft allocation • Blanket orders created for the efficient execution of long-term contracts • Serial and lot number processing handled • Flexible costing system provided for standard, average, FIFO, LIFO and specific costing • Multi-dimensional tracking and pegging provided to make data more visible • Forward, backward and manual flushing supported • Consumption and output journals produced • Production reports produced (for example, “where used” reports) • Costs tracked and landed costs handled
	Production Bill of Materials <ul style="list-style-type: none"> • Production Bills Of Material (BOMs), including phantom BOMs, created
	Version Management <ul style="list-style-type: none"> • Versions of manufacturing bills of materials and routings created and handled
Supply Planning	Basic Supply Planning <ul style="list-style-type: none"> • Order promising provides for both available-to-promise (ATP) and capable-to-promise (CTP) • Multilocation planning facilitates efficient information and material flow through the supply chain • Intelligent MRP scheduling (incl. regenerative, net change and action message planning) • Interactive action messaging – for the immediate balancing of supply and demand • Simultaneous planning of materials, capacities and costs • Item availability windows allow planners to instantly view the results of MRP • Multiple worksheets for reviewing various production options • Make or buy decisions implemented on the fly • Variants in planning
	Demand Forecasting <ul style="list-style-type: none"> • Forecast and Master Production Schedule (MPS)

NAVISION[®]
The Way to Grow

Capacity Requirements Planning

Basic Capacity Planning

- Shop calendar and work shifts
- Routings
- Parallel scheduling
- "Send ahead" functionality for Just-in-Time (JIT) production
- Routing link codes for automatic flushing per operational steps on the routing
- Scrap and stop codes can be defined to reduce data entry
- Automatic flushing of the work or machine center provides automatic recording of expected output
- Subcontracting by work center or operation

Machine Centers

- Allocates work and machine centers as capacities to the manufacturing process

Finite Loading

- Finite loading of capacity constrained resources
- Capacity constraints taken into account (to help planners make more reliable plans)

Additional Application Areas of Microsoft Navision Attain

- Financial Management
- CRM Marketing and Sales
- CRM Service
- Distribution
- User Portal
- Commerce Gateway
- Commerce Portal
