

## ADVANCED PICKING

### B E N E F I T S

Keep pace with competitive markets and low margins. Advanced Picking capabilities provide you with the flexibility needed to reduce handling and increase accuracy for both single and multi-site warehouse operations.

#### Save time

*and effort by issuing consolidated (bulk) picking lists across numerous orders for common items.*

#### Tailor

*operations at the site level by specifying whether or not bulk picking is in use.*

#### Increase picking productivity

Facilitate shorter pick journeys and send goods straight to the appropriate loading bay by producing bulk picks coupled with individual sequenced picks.

#### Gain Control over picking processes

Take control of the way you pick items by setting parameters based on site, bin sequence, schedule, consolidation, or individual item to maintain the best profit margin.

#### Minimize overhead costs

Reduce your handling time and cut down on errors with efficient and effective picking processes that meet your needs at each of your sites.

#### Improve efficiency and customer service levels

Gain operational efficiency and serve customers effectively by setting picks to match your warehouse layout, while still presenting documents to the customer in their preferred sequence.

#### Meet site-specific needs with configurable picking routines

Tailor picking routines to meet your individual site's business requirements, bin or bay sequence, or method of operation.

#### Integrate with distribution

Advanced Picking capabilities integrate smoothly with the pre-requisite Advanced Distribution module, providing document flow control, as well as with other Microsoft® Business Solutions–Great Plains® Supply Chain Management applications.

## ADVANCED PICKING | FEATURES LIST

Site-Level Configuration	Set picking rules by site to specify parameters such as bulk picking, picking sequence, and vehicle load or document batch control.
Item Maintenance	Specify parameters for individual items, such as whether an individual item can be bulk picked or should only appear on individual picking lists.
Sequenced Picking	Generate individual picking lists at the site level, in bin or bay sequence, regardless of the sequence of the originating transactions.
Individual Item Search	Locate individual items in sales transactions if quantities require adjustment prior to confirmation or fulfillment.
Consolidated Picking Lists	Configure and generate bulk picking lists to create consolidated picks of items across whole loads that may be required in multiple shipments.
Add to Load Facility	Produce bulk picks as schedules permit and make late additions to the load that can be picked as a separate consolidation.
