

# ExpandIT Launch Utility

NAV/Navision scheduling in 3 easy steps

ExpandIT Launch Utility enables scheduled and automated jobs in NAV/Navision from Navision Financials 2.0 to NAV 2009 SP1.

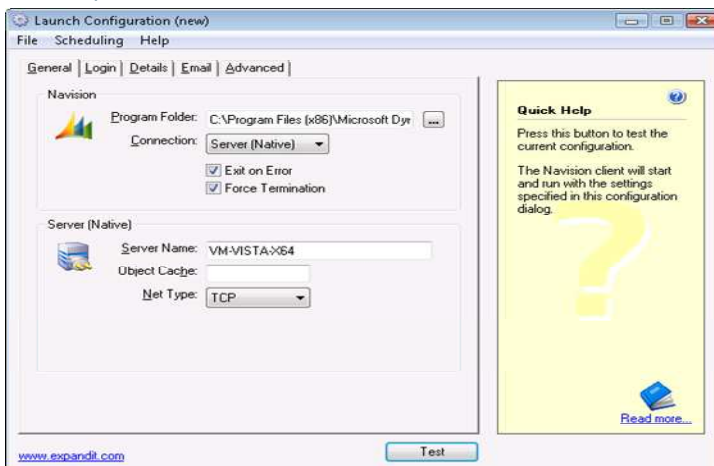

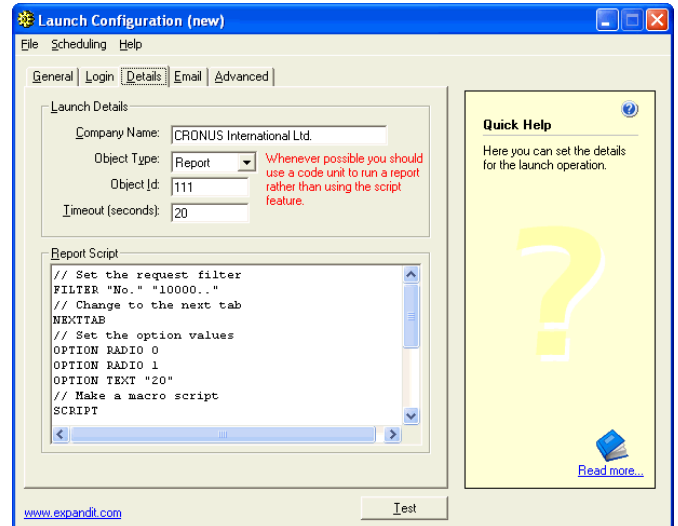

These jobs could be periodic reports or statistics, import or export of data (data port), or execution of stepwise operations (code unit).

## Works even after a server restart

It is sound business to automate recurring jobs to reduce human errors. Consequently there is an increasing number of interdependent jobs representing accumulated business knowledge.

Once in a while a server restart is necessary and then it is important that the system remembers all scheduled jobs, including all NAV/Navision jobs, and starts and stops them in the correct order.

ExpandIT Launch Utility uses Windows Scheduled Tasks because it allows you to schedule NAV/Navision jobs linked with scheduled jobs in other business critical systems.

Job scheduling is done in three easy steps:

### Step 1

Give ExpandIT Launch Utility the appropriate login credentials and tell it which task to run.

### Step 2

Tell ExpandIT Launch Utility how you want it to behave when it is done or if the job fails.

### Step 3

Save as many different job configurations as you like; create the Scheduled Tasks and complete the automation in the Windows Control Panel fitting the Navision job into your other scheduled tasks.

## Traceability

Every job is logged to trace problems and automate notification if intervention is necessary.

ExpandIT Launch Utility even sends a status report to

the system administrator via email or SMS right after executing a task.

## Product functionality in brief:

- Automate and schedule NAV/Navision jobs in your normal Job Scheduler.
- Status report via email or SMS.
- Intelligent error handling.
- Logging of events.
- Language independent.
- Passwords are scrambled.
- RUNASUPAS support.
- Supports Version 2.00 and above.

## Use case scenarios:

- Financial status is automatically printed and distributed to the management team before every scheduled team meeting.
- Pick lists are generated and printed early in the morning for the first work shift.
- Production planning runs are initiated as soon as ExpandIT Backup Utility has completed the system backup.
- The sales manager receives an email every Monday with a report over the top ten performing sales representatives.

ExpandIT Launch Utility can be downloaded from [www.expandit.com](http://www.expandit.com) and comes with a demonstration license, that accepts companies with names starting with CRONUS.
