## Microsoft Dynamics AX Add-Ons
Bulk Data Modification

With the "Bulk Data Modification" add-on, the modification of large amounts of data is done within seconds with just a few mouse clicks. You do not need to be proficient in SQL nor use Excel as a helping tool. Any Dynamics AX user with the corresponding access rights can work with the Bulk Data Modification tool without any problems.

Features

- Security
- Easy to use
- Restriction of access rights
- The tool can be accessed from any mask through the function "Record information".
- The values of each data type can be changed: numerical, text, date, time and selection (dropdown and checkbox).
- Calculations: Numerical values can be replaced or changed in relation to the existing value (addition, subtraction, multiplication, division).
- Text values can either be replaced or pre- or suffixed.
- If a field contains look-up or default values, only these values can be selected.
- Date values can be replaced or a new date can be calculated based on the existing one.
- If necessary, the record validation can be skipped.

Examples of use

- Price changes: Increase of the cost price in the item master by 2% by simply multiplying the existing price by 1.02 (see illustration).
- Modification of the price group in the customer master table for customers of a certain customer group
- Replacement of sales responsibles in all open sales orders
.

Available for

Dynamics AX 4.0, all SPs
Dynamics AX 3.0, all SPs
