

Maximum Compatibility

Anveo Web Desk runs on Dynamics NAV 2013 and Dynamics NAV 2009 SP1/R2. With a technical update, previous Dynamics NAV/Navision versions can also be used, even without the existence of Pages.

Browser of Choice

Use any common browser to get access: Anveo Web Desk supports Internet Explorer, Firefox, Safari, Chrome and Opera.

Easy Start

As the set-up takes place completely in Dynamics NAV, Anveo is very easy to understand: The Anveo Training workshop takes just one working day.

100% Dynamics NAV

The user interface always runs the business processes from Microsoft Dynamics NAV – it's always live and on-line, guaranteeing up-to-date data.

Extensive Base Application

The Anveo Base Application provides ready-to-use templates for most important usage scenarios. This speeds up your solution development impressively.

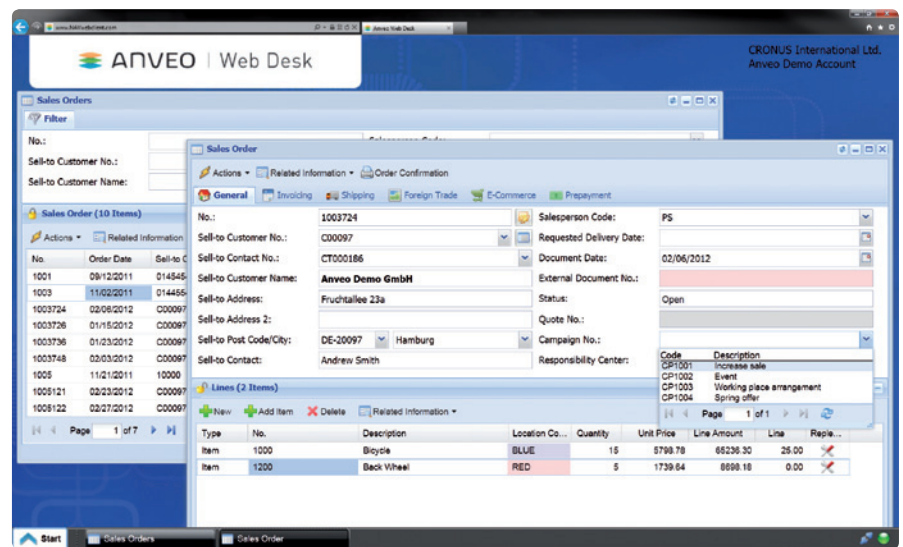

Maximum Performance

The integrated Load Balancer automatically connects to multiple Dynamics NAV servers to split up the workload to improve overall performance.

Anveo Web Desk

Web-portals and intranet solutions for Microsoft Dynamics NAV

Experience new ease of use: create any web application directly in Microsoft Dynamics NAV and provide live access to your business partners to selected data of your Dynamics NAV database. Create web portal solutions for customers, vendors and employees – fast and easy with Anveo Web Desk.

Dynamics NAV in your browser: Edit your sales orders with Anveo Web Desk.

Anveo Web Desk is a toolkit for easy creation of web applications for Dynamics NAV. Configuration takes place completely in Microsoft Dynamics NAV Windows Client (or RoleTailored/Classic Client), so Anveo significantly speeds up development time. Just select your desired fields by mouse click without writing a single line of program code – and your user interface is designed and ready to go within minutes.

Easily restrict access for external users: in your Anveo Web Users administration set-up a relation code for customers, vendors or sales personnel, all records are filtered automatically to their scope of view with just one attribute. For example, if customers should only see their own sales orders – simply set the attribute and your defined filters apply.

Get full control of your own C/AL code: Anveo provides a very flexible interface for Dynamics NAV developers: any button in your web application is mapped to your own Anveo events code unit, and all existing business code including your customizations is run by Anveo.

You can use our existing templates for fast solution development or you can build your individual solution from scratch.
