Your business partner and you can work hand in hand. Your important data is in the right place at the right time with IT IS connect now.

In the daily business of your company, there is a remarkable amount of data to be processed. Above all, documents like invoices, quotes, orders, bills of delivery, and other forms and regular correspondence are everywhere, and retyping those is a common practice.

Some people do nothing else but to process huge amount of data typing them from hardcopy form into your business system. This means a time-consuming, but still non-productive job for many enterprises, because the electronic data often already exists elsewhere. Wouldn't it be much better if it just needs checking and taken over? This would save enormous amounts of

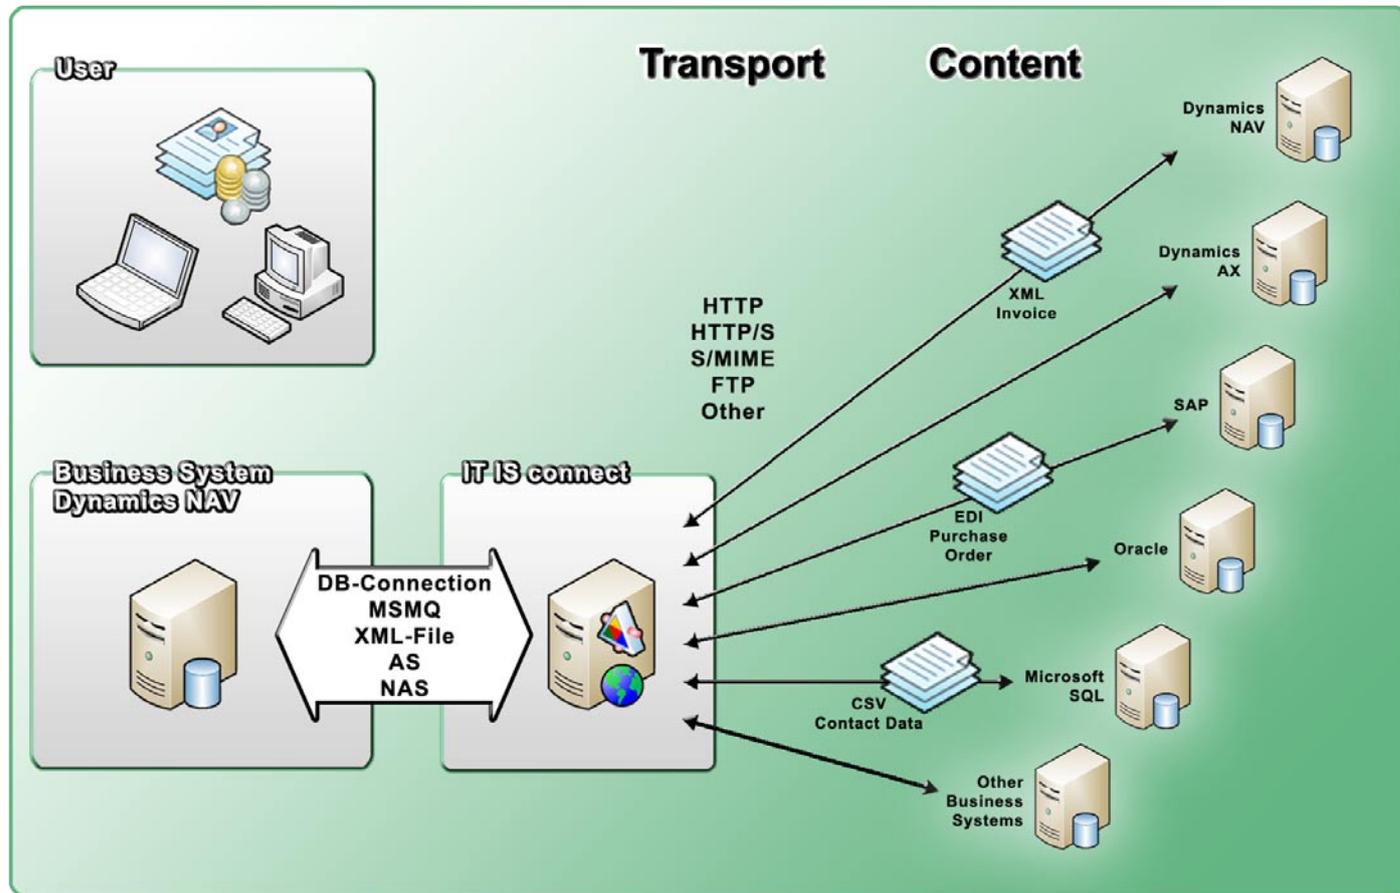

time. With IT IS connect, that wish becomes reality. Directly use data from different associated systems for your own purpose, always with a maximum technical security, of course. Furthermore you don't have to be concerned, if your "counterpart" can directly process your data without any difficulties, because the transmitted IT IS connect documents represent a standard which is understood by many participants or could be translated easy. Since the steering board to the data exchange is in your business software or in a browser, IT IS connect is very user friendly.

IT IS connect is a .NET based communication system. It enables electronic data exchange in the B2B area and acts as gateway for various IT systems. IT IS connect is an inexpensive flat rate, because the cost does not depend on the number of transmissions. Want some figures? IT IS connect has done more than 550.000 transactions. Today there are over 1000 satisfied IT IS connect-user, and counting.

Structured functionality with IT IS connect 2011

A solid, safe, and error-proof architecture for the exchange of business document with trade partners: Use it many ways with IT IS control 2011 and Microsoft Dynamics NAV.

IT IS connect is standard conformity paired with great flexibility

During the development of IT IS connect we paid much attention to the possibility of enabling an easy and flexible data exchange between various IT systems.

IT IS connect is flexible enough to cope with future demands and enlargements.

The advantage of such an universal system is, that all of the connected entities use one common "language" towards the other entities. This ensures that each partner, which is participating the data exchange and using IT IS connect, is able to "understand" each of the other participants easily.

You can integrate interfaces for individual software solutions. With this, you can adapt IT IS connect to the customer's and partners requests. Because of this flexibility, IT IS connect is standing out from other systems in the industry.

IT IS connect offers secure communication and data exchange

Another very important point is the security of the communication. This means, that mechanisms, which acknowledge the receipt of every document, are integrated into IT IS connect. Verifications of authenticity, high encoding and a qualified signature are also possible as option in a project.

IT IS connect: less mistakes means less costs

Efficient operations are worthwhile to archive for good reason: The colleagues always exactly know what shall be done and do not have to consider any complex hand-ling of singular cases or exceptional rules. So the members of staff can concentrate on their major tasks. But what can information technology do for that?

With the aid of data processing and electronic data exchange, the quality of the data is particularly improved: Avoid mistakes from mistyping or wrong filled forms,

tries and redundant acquisition of data will be avoided. The members of staff use and send the structured data, which is already filled by the participants before. They will use those to forward information to their colleagues. Thereby, a lot of former transcribing activities now become actions of examination.

So the speed of processing the data is rising while there are less mistakes. Practical experiences show, that the quality of data increases about 800% through electronic data exchange. This modern way of information exchange will shortly make a contribution to alleviate the professional life of the personnel, increase their efficiency and productivity.

The screenshot displays the 'IT IS connect Administration' web interface. On the left is a navigation tree with categories like 'Applications', 'Dynamics NAV', 'XML Data Exchange', and 'IT IS AG'. The main area shows a process definition for 'Send Order' within the 'Order Management' application. The process flow is as follows:

```

    graph LR
      C1_3[receive (C1_3)] --> C1_4[transform to SAP Orders05 (C1_4)]
      C1_4 --> D1[document ok]
      D1 -- yes --> C1_5[https transfer (C1_5)]
      D1 -- no --> C1_6[send feedback (C1_6)]
      C1_5 --> C1_7[write log (C1_7)]
  
```

Below the flowchart, a table provides details about the process:

Process	
Process Name	Send Order
Assembly Name	ConnectReceiveFromNav.dll
AssemblyVersion	9/1/2011 5:31:00 PM
Is Process Active?	<input checked="" type="checkbox"/>
Description	Send order via https as SAP ORDERS05 document type.

At the bottom of the interface, it says 'IT IS connect © 2011 by IT IS AG'.

Definition of processes with the new, web based user interface of IT IS control 2011. The dashboard server with easy control and customization over your business processes.

because the right values are available in the right form already.

IT IS connect is very conducive here and as consequence it's use will lead to a lowering of costs. This is because wrong en-

Use optional digital signature and encoding for maximum security

The communication system of IT IS connect is based on XML (Extensible Markup Language), an international standard for

the creation of machine- and human-readable documents in terms of a extendable tree structure.

Very important: during the development of IT IS connect we strictly adhered to the recommendations and restrictions of W3C (world wide web consortium). Thereby, the system is very flexible and can be adapted to future requirements. By using XML the preferences of flexibility and conformance are united with international internet-standards.

IT IS connect continues to be very secure: high encoding and decentralized data exchange (point-to-point transmission) ensures data security at each transmission, so your data will never be in the hands of unauthorized persons.

Together with an business software like Microsoft Dynamics NAV, it is possible to reach a paperless and secure exchange of business documents; thereby, IT IS connect virtually suits every other standard software.

IT IS connect delivers the data, which already exists in your system, in a fast and secure way to the desired communication partner. The re-entry into internet forms or the filling in a form completely drops.

Especially coordination processes with your partners are extremely time saving now. Just like you were sending an e-mail, but secure and directly, it is possible to transfer data per the push of a button, even during you discuss about the data with your partner.

The starting screen of the new web based user interface of IT IS connect: all users can check easily on the regular behaviour of the processes and see a critical situation immediately.

Furthermore IT IS connect already provides the foundation for digital signatures, which may be useful to optionally implement in a project, so that the identity of each particular participant and the derivation of the data will be traceable and therefore becomes secure.

Your dialogue partner achieves the qualified data in no time at all exactly where he needs it in his system and immediately is able to check, approve and redirect your changes to the next partner.

From this point, the extended dataset is either rebuilt, transferred or is sent back

The screenshot shows the IT IS connect Administration web interface. On the left is a treeview menu with the following structure:

------------	--

Navigation and structuring made easy and efficient. The treeview menu has the details for the particular process and there you can drill down into messages and log entries.

Using IT IS connect, the communication system for electronic data exchange, we are the outrider of a Germany-, even Europe-wide unique solution which simplifies the document exchange.

IT IS connect acts as interface for various IT-systems, therefore this system has the attribute of universal applicability.

IT IS connect enables the qualified digital signature. Furthermore the point to point technique ensures maximum security at each transmission.

Dietmar Schulz: General Manager
Jörg Aulfinger GmbH

to the former partner. So, at the end of the process, every partner has the complete and correct data in his system.

IT IS connect is fully configurable, supports workflows, communicates with all kind of protocols and transmission channels (e.g. HTTP/S, SMTP, FTP) using EDI, XML, and Flat file Data. You can learn more about the technical details on our home page.

The new web-based user interface

The message's broker of IT IS connect works reliable and smooth, completely in the normal operation without assistance of a user. But there are different reasons why one can get the new surface in the look again and again once: On the one hand to the facilities of the system and on the other hand for supervising the different sending and reception events.

A great advantage is the gradual sophisticated user guidance: Without registration the observer can already see whether the system works without faults or whether there is a disturbance. The report is carried out day wise and in addition represents the condition of the main services for sending and receiving.

menu on the left side or can create new processes immediately.

In the processes menu, the sequences and steps can be comprehended with a corresponding picture to visualize the process and it's contributors. In addition, the people now logged on will receive in-detail information about sending and reception and

Instant overview about then status of a particular process. The color guided system provides you with a quick indication of the successful and failed messages.

A person without administrative privileges can therefore also inform himself about the status any time. Further notification about the status can be carried out per process as an e-mail and therefore inform the user whether everything is all right.

The user can regard the document exchange processes in detail once logged on as an administrator. He gets an overview of the events already given on the initial page to everybody, but now with full particulars. From here, he can navigate to the established processes over the comfortable

can supervise the message processing in the protocol.

The function for resending a message is particularly unique and makes dealing with the communication partners very much easier for the users in a connection abort or other difficulties in transmission.

The received data are then existing in your Microsoft Dynamics NAV either directly in the right table or in an intermediate table for the further processing. For example you can either reprocess them to do an order from an quotation confirmation here.

Information Brochure

Quotes, orders, invoices and all other documents send and received just in seconds, as if you entered them manually.

You will receive IT IS connect solely via your local qualified dealership.

Please ask your IT IS connect partner to use the tremendous advantages of this ground breaking product.

We would like to help you as well!
