### Description

### Agenda

### Requirements

#### What is Microsoft Dynamics NAV?

MS Dynamics NAV is a business solution that is designed for growing small and midsize business. In order to meet company's specific needs both applications can be customized.

#### Approaches

SpeedTeach lets you learn the basics of MS Dynamics NAV online, which is the best solution of optimizing your learning process. Moreover, the course is available in two approaches: Conceptual Approach and Procedural Approach. You can choose one or even both approaches to gain the theoretical, demonstrational and the practical skills you need according to the application's structure (Conceptual Approach) and as a set of business processes with separate business tasks (Procedural Approach).

#### Course scope

Upon completion of this course you will know how to:

- Work with the user interface and data validation;
- Manage Postings;
- Manage Dimensions;
- Process Strings;
- Integrate with external applications.

You will also get acquainted with:

- The C/SIDE Development Environment;
- The Basic Application objects: Tables and Forms;
- The internal MS Dynamics NAV programming language – C/AL;
- The extended application objects: Reports, Codeunits, Dataports, XML Ports and Menu Suites;

- The main integration technologies: C/FRONT, ODBC, Automation Server
