

Backup Utility

– automated backup in 3 easy steps

ExpandIT Backup Utility enables scheduled, automated, consistent and reliable backup and restore of NAV/Navision.

Consistency is important:

Not surprisingly that feature will back the NAV/Navision database up but it does more: It performs a consistency check of the running database.

Why is that important?

Because the NAV/Navision data structure will prevent restore of an entire database if just one record is inconsistent.

What is consistency?

In NAV/Navision terms consistency means that each individual record makes sense to the bookkeeping-system. Single-entry bookkeeping? — No thank you!

What does this mean?

It means that if you are making a backup of your server including the NAV/Navision database file (.fdb) or if you are making a SQL Server backup, then your backup file is not tested for consistency.

It's easy:

Step 1

Give ExpandIT Backup Utility the appropriate login credentials and tell it what you want to backup.

Step 2

Tell ExpandIT Backup Utility how you want it to behave when it is done or if the backup fails.

Step 3

Save as many different backup configurations as you like; create the Scheduled Tasks and complete the automation in the Windows Control Panel fitting the NAV/Navision backup into your other non-NAV/Navision scheduled tasks.

"With ExpandIT Backup Utility we could have saved one week of production downtime and our data."

- CIO Falbe Hansen,
Henrik Frandsen

Functionality	ExpandIT Backup Utility Standard	ExpandIT Backup Utility Professional	ExpandIT Backup Utility Enterprise
Unattended Backup. The ability to make a scheduled backup without user interaction	●	●	●
Check consistency of live NAV/Navision database Perform database check during backup operation	●	●	●
Small .fbk backup file Create a NAV/Navision backup file (.fbk) which is only the size of the data in the database	●	●	●
Email notification Send backup status notification in an email.	●	●	●
SQL Server backup Backup a NAV/Navision system running on a SQL server	●	●	●
Backup selected companies Create backups with selected companies	●	●	●
Native server backup Create backups with native server	●	●	●
Preserve NAV/Navision Server cache The cached data in the server is reset. The result is better server performance	●	●	●
NAV/Navision Financials backup The Navision Hotcopy utility only comes with NAV/Navision Attain	●	●	●
Compressed .fbk backup file Create a compressed zip file containing the .fbk backup file		●	●
Event log notification Write backup status information to the system event log		●	●
Run program on success Execute an external program if the backup is a success.		●	●
Run program on error Execute an external program if the backup fails		●	●
File name macros Use date, time, and counters to generate new backup file names each time it runs		●	●
Consistency of backup file Perform consistency check of generated backup file. Check ability to restore.			●
Fast restore Facilitates fast restore based on a copy of the database files.			●

ExpandIT Backup Utility can be downloaded from www.expandit.com and it comes with a demonstration license that backs company data up only.
