# BevERP™ by RealTime IT Services

Benefits:

- **Business Process Modeling and Operation Planning**
  allows a company to create multi-dimensional business models and plan operations by entering a few basic model parameters.

- **Consensus Forecasting**
  allows the use of a company's unstructured knowledge of current business conditions to adjust operation plans on a periodic basis.

- **Statistical Forecasting**
  allows a company to use best feed statistical models for demand forecasting.

- **Distribution Channel Optimization**
  allows a company to minimize distribution costs.

- **Bottling Operations Planning**
  allows a company to create a master production schedule for distributed bottling operations within a national or international distribution channel.

- **Material Requirements Planning (MRP)**
  allows a company to minimize inventory of raw materials.

- **Lot Tracking**
  provides tracking of finished products and ingredients during the complete cycle of operations from purchase to production to sale with support of multilevel recall options.

Beverage Distribution and Processing Industry

BevERP™ is the Microsoft Certified solution for the Beverage Distribution and Bottling industry based on the Dynamics NAV ERP system. The solution combines the power and flexibility of Dynamics NAV with the experience of NAV consultants and industry experts.

Beverage Distribution Process Model

80% of operation improvements come from process optimization and only 20% comes from a system. Most systems provide a similar set of features but only few companies focus on the process. Our process management team went through each operation with a stop watch and eliminated all "waste" activities. Our current software package includes a "Best Practices Process Model" that can be used as is, or tailored based on the individual needs of the company. We are using the best process simulation tools to guarantee that your improved process will provide measurable results. (Sample Customer Process Model)

Microsoft Dynamics
