

Microsoft Dynamics™ AX 4.0 SP1 Spain release notes

The following release notes are for the Spain release of Microsoft Dynamics AX 4.0 with Service Pack 1 (SP1).

Changes to payment system in Microsoft Dynamics AX 4.0

In Microsoft Dynamics AX 2.5 SP3 some major changes were introduced in the payment system. The release of the new module of “Cartera” (Bill of exchange and Promissory Note), the implementation of the “Promissory Note” (Spanish “Pagaré”), and the adjustments done to the “Payment Management” feature to adapt it to the payment processes of the Spanish market are some examples.

Due to the major advantages of these changes, they have quickly become widely used among both our Microsoft Dynamics AX 2.5 and Microsoft Dynamics AX 3.0 customers and, as a consequence, the use of “Old pagare ES” and “Old Cartera ES” functionality was reduced to a minimum.

In Microsoft Dynamics AX 4.0, these features (“Old pagare ES” and “Old Cartera ES”) have been removed because the changes introduced in the payment system have been adopted by most customers.

Potential Upgrade Data Loss in Currency Table GenderMaleFemale Field

If you use the GenderMaleFemale field in the Currency table in Microsoft Dynamics AX 3.0, but have not set the configuration key for Spain (CRSESpain) to active, you will lose the data in the GenderMaleFemale field when you upgrade to Microsoft Dynamics AX 4.0. This field is only available in Microsoft Dynamics AX 4.0 when the configuration key for Spain is active. To avoid this problem, back up your Microsoft Dynamics AX 3.0 database, and after upgrading, import the data from this column to another column.
