

roman's(MP – Menu Picture Installation Guide. (all versions)

It is recommended to import the roman's(MP objects before any other customization are done to the database. Otherwise it could be possible you will overwrite customizations.

If you'll import these objects you will lose your native language layer in Navision. Follow the steps below to install these objects without losing your language layer.

1. Open database and go to object designer (Shift + F12).
2. Select objects: table 79, form 1 and form 330.
3. Choose Tools / Translate / Export; name the file
"MPOrgTranslation.txt"
4. Import file "roman's(MP.fob"
5. Select objects: table 79, form 1 and form 330.
6. Choose Tools / Translate / Import; select file
"MPOrgTranslation.txt"

.....
Also included with roman's(MP is the "Picture Resolution in
Navision.doc" document that describes the correct way to format picture
imported in Navision.
