

TRANSPORT MANAGEMENT SYSTEM

for Microsoft Dynamics™ NAV

Transport Management System (TMS) vertical solution, fully integrated in Microsoft Dynamics NAV, covers the full requirements for companies managing business vehicles, especially international forwarders by road (road transport companies). It is developed to manage vehicles (truck, trailer) allocation, drivers allocation, vehicles locations, planning, history analyzing, intelligent searching of free vehicles in future days etc. TMS is very straight integrated with Dynamics NAV jobs, so that every vehicle or driver work is registered in jobs ledger entry so that you can manage vehicles in a complete Dynamics NAV way. Besides this with TMS you can manage: vehicle and driver order processing, fully automated invoicing for customers and vendors, links between purchasing and selling, agency work processing (for cooperators), vehicles costs managing and analyzing, vehicles maintenance registering, vehicles, drivers and operators efficiency. Apart this the TMS module includes improved and adapted cash management, travel costs management, sales and purchases. The TMS is integrated with a fleet management solution to offer a complete set of tools for a more effective communication and information exchange between the truck and the office.

Transport System vertical solution is an effective and genially intuitive solution for managing resources in road transport companies.
