

# ExpandIT Mobile Time

EXPANDIT  
solutions

ExpandIT Mobile Time supports teams, consultants and project managers, who are required to register time on daily or weekly basis. Time can be registered on internal and external projects and the systems supports up to 10 dimensions.

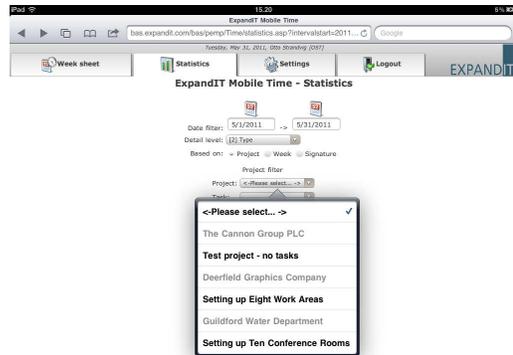

The projects are set up in Dynamics NAV/Navision and the project structure is extracted to ExpandIT BAS<sup>®</sup>, and then on to the relevant clients.

The registrations are listed in a week sheet and can be copied into other weeks so project workers can create weekly templates.

The daily total; the weekly total and the total per project are displayed and once the user is satisfied that all is correct, then the week sheet can be finalized and returned to the back-end for further processing.

Finalized registrations are included in the statistics where the user can filter on date, projects, the appropriate dimensions and select how detailed the resulting information is to be displayed.

ExpandIT Mobile Time is easily modified by ExpandIT Partners and the mobile client can be executed as a thin client (web user) or as a rich client with offline usability.

When the time entries are completed they are sent to NAV/Navision job journals where they can be posted to projects in the same manner as manual time sheets. Customizations to Jobs in NAV/Navision may be accommodated in the ExpandIT granule, 6038700.
