Microsoft Dynamics AX Add-Ons
Report Mailer

Have you ever sent reports as e-mail attachments directly from Dynamics AX and would have liked to have a more user-friendly layout? Do you also think that the Outlook dialogue requiring you to confirm that the report e-mail is sent is unnecessary? Would you like your reports such as purchase orders and sales confirmations to be sent automatically?

Then the "Report Mailer" add-on is your solution.

Features

- The e-mail text can be defined by using e-mail templates. Thus you can create your own HTML e-mails with your individual content.
- For each report, there can be one template.
- E-mails are sent by either MAPI, extended MAPI (Outlook) or CDO (SMTP). With the SMTP option, the e-mails are sent directly through the mail server. In this case, Outlook does not have to be installed and the Outlook security dialogue will no longer be shown.
- In the accounts payable and accounts receivable module, documents can rapidly and easily be sent to contact persons by e-mail without your having to modify the printer settings (see illustration).

Examples of use

- Send sales confirmations to the e-mail address saved in the sales order or to the client's contact person rapidly and by simply ticking the corresponding box in the posting form.
- Design HTML e-mail templates for purchase orders, sales confirmations, invoices etc. in different languages. The language is chosen automatically according to the language of the report.
- Avoid the Outlook security dialogue by sending your e-mails by SMTP.

Available for

Dynamics AX 4.0, all SPs
Dynamics AX 3.0 on request
